Roof A/C Unit

## “The Negative Zone” Comic Store

### Supplies:

¼” foam board  
Spray adhesive  
Hot glue gun with glue sticks  
Exacto-knife or rotary cutter

### Instructions

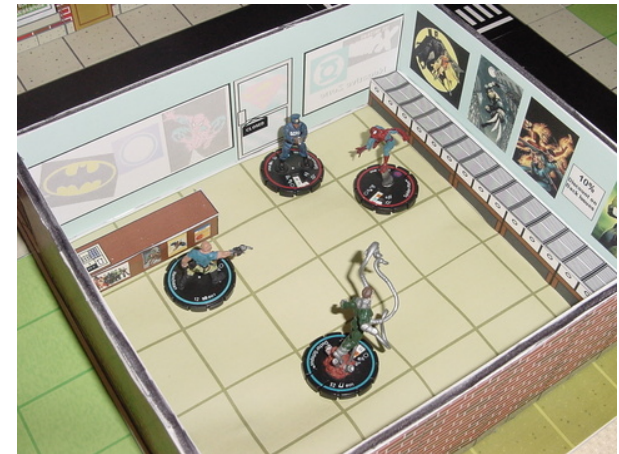

The comic store is a basic box with finished interior features. If you don't like the comic posters in the shop, use your own graphics software and add your own favorites.

1. Cut out foam pieces in the same shape as the exterior pieces and the roof and floor. Use spray adhesive to attach the cutouts to the foam.
2. Cut out the interior walls and glue them to the opposite sides of the exterior walls. Be sure to match the windows on the front. Glue these pieces all together to create the box.
3. Assemble roof and floor. You can make the floor flat by using a thin piece of cardboard instead of foam.. Don't glue the roof to the top of the walls, or you won't be able to play inside the shop.
4. Assemble the interior pieces. The comic boxes and cashier station are simple L-shapes made of foam. The A/C unit is a simple box. I'm not going into specifics on assembling these. Just look at the example pics and wing it. Go ahead... I know you're creative.
5. Add your own comic geeks and junk food for atmosphere. Defend the comic book store from evil with your favorite 300 point army. ☺

Enjoy!

All images and the Negative Zone are copyrights of Marvel Comics and DC comics.

Please don't sue me Marvel or DC. I'm a big fan, and I've brought more people to your comics than I can count. I'm not making any money off this stuff.
